YubiKey Deployment Best Practices Workshops

Specialized workshops providing best practices and operational tips to help you successfully deploy YubiKeys in your organization.

Yubico is leading the charge toward a more secure and frictionless authentication future. Our team of experts provides guidance and best practices in deployment best practices workshops designed to help kick start your YubiKey deployment planning.

This workshop will focus on helping you develop a strategic plan and playbook for a successful YubiKey rollout, emphasizing crucial aspects such as:

- Project Planning and Readiness
- Understanding Lifecycle Management
- Effective User Communication & Marketing
- User Training & Support
- Launch & Go Live
- Reporting
- Customer Examples

We'll review Yubico's unique deployment methodology and share customer stories and their lessons learned.

All attendees receive a Deployment Best Practices Guide plus a comprehensive asset library including messaging templates, sample project plans and more.

Workshop topics:

YubiKey 101
Review the YubiKey's features and benefits

Project Planning
Examine a sample project plan and review the four main phases of a successful deployment

Lifecycle Management
Examine options for distributing YubiKeys to your users as well as registration options. Review user lifecycle processes such as replacing or revoking YubiKeys and onboarding new users

User Communication and Marketing
Discuss the most effective ways to explain the benefits of strong authentication and your YubiKey deployment to your users

User Training and Support
Review the optimal training processes and materials. Integrate YubiKey support into your existing help desk processes, materials and support scripts

Go-live and Launch
Review best practices and approaches for successful pilots and launch activities

Deployment Reporting
Examine the best metrics and techniques to measure the success and impact of your YubiKey deployment

1. Planning
Project considerations, roles/responsibilities, and timelines

2. Lifecycle Management
Key distribution, user registration, and authentication

3. Training & Support
User training materials, help desk processes, and scripts

4. Launch & Reporting
Go-live planning, key activity, and success metrics
